## Summary

Final-year B.Sc student at IIT Patna specializing in Computer Science & Data Analytics, with a focus on **Artificial Intelligence**. Skilled in **Machine Learning, NLP, and Python**, with experience building end-to-end AI solutions. Developed **UniPulse AI** under Prof. Kuldeep (IIT Patna), an NLP-based platform for real-time university sentiment analysis across academics, placements, and campus life. Eager to contribute to **research-driven AI projects**.

## Education

| Degree/Certificate | Institute/Board                       | CGPA/Percentage | Year      |
|--------------------|---------------------------------------|-----------------|-----------|
| BSc (CSDA)         | Indian Institute of Technology, Patna | 8 (Current)     | 2023-2026 |
| B.Tech. (CSE)      | Katihar Engineering College, Katihar  | 8.2             | 2023-2027 |
| Senior Secondary   | CBSE Board                            | 88.0%           | 2021-2023 |
| Secondary          | CBSE Board                            | 91.0%           | 2021      |

## Experience

### HCL GUVI

July 2025 – Oct 2025

*Data Analytics Intern*

*India-Remote*

- Analyzed student online library usage data using **Power BI**, identifying peak usage patterns and improving resource allocation insights by **30%**.
- Designed interactive dashboards to track engagement trends, enabling data-driven decision-making for academic resource planning.

### Codec Technologies India

June 2025 - September 2025

*Data Analytics Intern*

*India-Remote*

### E-Commerce Sales Forecasting & Product Recommendation | *Python, Prophet, Scikit-learn, Pandas*

- Developed a **Facebook Prophet** time-series forecasting model achieving **90%+ accuracy** to predict sales trends across regions and channels.
- Engineered a **hybrid recommendation system** combining popularity-based and content-based filtering, improving product suggestion relevance by **35%**.
- Optimized demand analysis by identifying high-performing regions and underperforming categories, supporting data-driven expansion strategies.

## Projects

### UniPulse AI – University Sentiment Analysis Platform | *React, FastAPI, SQLite, Recharts* | [Live](#)

April 2026

- Engineered a full-stack sentiment analysis platform processing **1000+ Reddit posts** using **PRAW** and **VADER** for NLP-based sentiment scoring.
- Developed a **React (Vite)** frontend with real-time dashboards, reducing manual analysis effort by **40%**.
- Built a scalable **FastAPI REST API** with SQLite backend for efficient data retrieval and cross-university sentiment comparison.

### Netflix Data Analysis | *Python, Pandas, Matplotlib, Seaborn* | [GitHub](#)

Jan-2025

- Performed data cleaning and preprocessing on large-scale datasets using **Pandas**, improving data quality and consistency.
- Conducted **Exploratory Data Analysis (EDA)** to uncover trends in content distribution, release patterns, and regional production.
- Built visualizations to identify correlations between ratings, genres, and user engagement, enabling actionable insights.

## Technical Skills

**Languages:** Python, C++, C, HTML/CSS, JavaScript, SQL

**Developer Tools:** VS Code, Git, Google Colab, Jupyter Notebook, Power BI, Tableau

**Technologies/Frameworks:** React (Vite), FastAPI, Streamlit, Vercel, Render, Kaggle, GitHub

**Libraries:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, PRAW, VADER, Facebook Prophet, Recharts

**Core Skills:** Machine Learning, Data Cleaning, Feature Engineering, Model Evaluation, Data Visualization, REST API Development
